

Transitions

Press release

Belgian artist Stephanie Cime has unveiled a deeply introspective and transformative collection of works titled “Transitions”. The collection is a celebration of the power of guided coincidences and the slow, meditative process of creation, inviting viewers to engage with the transformative power of art and the human capacity for growth and change.

Each piece in “Transitions” is a reflection of Cime’s own journey of transition and is created through a process that is hypnotic and almost like watching a butterfly emerge from its cocoon. The artist allowed herself to be guided by the coincidences and chance encounters that arose during the creation of each piece, resulting in works that exude a sense of calm and introspection.

Through her work, Cime hopes to inspire others to embrace the transformative power of guided coincidences and to find the courage to transition. “Transitions” invites the viewer to connect with the transformative power of guided coincidences and the slow, meditative process of creation on a deep and emotional level.

“Transitions” is a celebration of the human capacity for growth and change and the transformative power of art to inspire and transform. The collection is a must-see for art lovers seeking to explore the power of transformative art and the human journey of self-discovery and growth.
